 - ▶ Developing cutting edge web applications using PHP, ASP.NET, Rails and J2EE solutions
 - ▶ Developing outstanding animations using Flash with Action Script and Macromedia Director
 - ▶ Providing Cyber Security services and Solutions all over the world
 - ▶ Digital Brochure and Presentation development using Photoshop , Illustrator, Studio Max & Maya
- Providing IT services and Consultancy

Cyber Security & Consultancy

Cyber Security Consultancy

Ensuring the security of confidential business data including your customer's sensitive personal and financial details requires constant attention. And though not every business demands the full-time commitment of an executive to oversee this function, small- to mid-sized businesses do need the same level of security and intelligence already in place at larger corporations.

That's where we step in. We can protect your organization at the same level you would expect from a fulltime chief information security officer through our Virtual CISO service without the steep investment of executive compensation and their associated benefits package. Work in collaboration with Cyber Security professional team able to maintain a relationship with your team and become familiar with both your environment and industry so you stay on top of constantly evolving threats and regulations.

While it's not always cost effective to hire a full-time Chief Information Security Officer (CISO) and team to lead risk management and information assurance programs, our advisors can deliver much of the same services at a fraction of the investment you would pay for a full-time executive and team hire.
